oyster

Oyster is software that configures and quotes enterprise hardware for IT resellers

When a company buys servers, a specialist has to pick every part so the order is valid. Oyster does it from a plain-language request. The first outside user had a valid HPE order **19 minutes** after signing up. Raising **12 MSEK** seed.

Axel Sundelöf · axel.sundelof@oyster.tech · October 2026

Confidential

TRACTION

Forty users in four weeks. The first one had a valid HPE order nineteen minutes after signing up.

40

Users signed up or onboarding since the doors opened on 29 September, five countries

19 min

First outside user: signup to an order accepted by HPE's ordering tool

99 %

Of our orders are accepted by the manufacturer's ordering tool first time

1 in 4

Cold LinkedIn requests to specialists accepted; one in seven asked for an account within days. 60 resellers, 12 countries

25

Production releases in October, each from something a user hit

2

Manufacturers supported, IBM and HPE. Zero outside capital so far

> "Sounds amazing, love to help." · "A tool I would build myself if I had time." · "I like the tool, and I will keep testing."
>
> Three reseller specialists, the Netherlands and Sweden, unprompted, October 2026

PROBLEM

Every server order is assembled part by part in the manufacturer's own tool, and few people know how

- Servers reach companies through **resellers**, who buy from wholesalers (**distributors**)
- Each manufacturer has its own ordering tool (HPE: OCA, IBM: eConfig) that **rejects any invalid combination**
- Only a specialist, the **presales engineer**, can drive it, and each knows **one or two manufacturers**
- A reseller sells **five**
- Deals outside those are **turned away**
- A specialist costs **90 to 130k SEK a month**

2 hours
per server order today

5 minutes
with Oyster

> "This is the future of the field. AI assist means one engineer covers roughly five vendors."
>
> Marius Midtskogen, senior IBM specialist at a Nordic distributor and our pilot user

PRODUCT

Describe what the customer needs. Out comes an order the manufacturer accepts.

1 · The brief, verbatim

"A cheap server with two power supplies. iLO. Two NICs. 16 GB RAM. Windows Server 2025 Standard."

A reseller specialist's first request, 15 October. Oyster asked four questions back.

→

2 · Oyster builds

An entry HPE server: processor, memory, two SSDs, boot drive, network card, two power supplies, Windows licence, support

25 order lines, each checked against HPE's own rules. 19 minutes from signup.

→

3 · The verdict

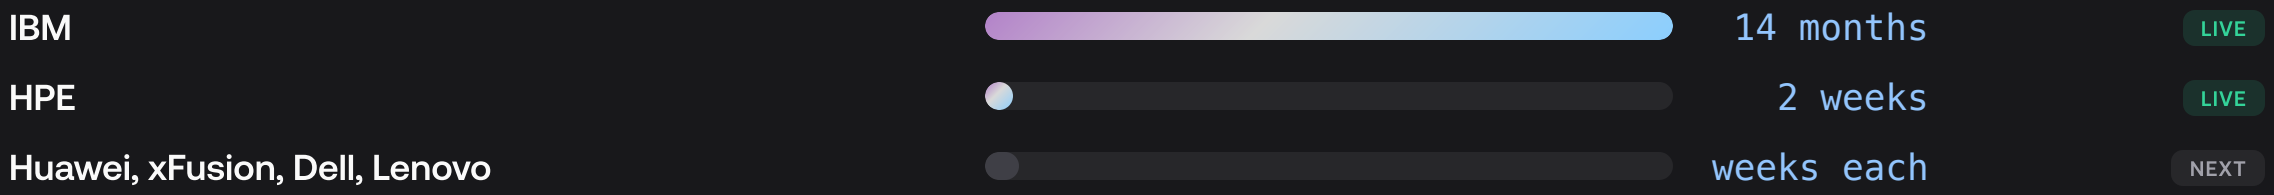

Accepted by HPE's ordering tool

Twelve test requests in September: nine accepted with an HPE order reference, two correctly refused because the request could not be built, one duplicate.

The order file, the parts list, a branded quote. **Works in the browser, or inside Claude and ChatGPT.**

MOAT

Hard to copy: the knowledge sits in captured catalogues and rules, not in the AI model

CAPTURED CATALOGUES

135 HPE chassis, 110,000 option codes, nine IBM Power machine types, read from the manufacturers' own tools, not from documents.

VERIFIED RULES

4,800 vendor rules, each proven in the manufacturer's tool before it ships. A rule without a proof never reaches production.

EVERY DEAL ADDS RULES

Built with working specialists, deal by deal. **25 releases in October** came from gaps users found.

When a better AI model comes out, nothing changes: **the model only picks from options we captured; our code writes the part numbers.**

WHY NOW

Three things changed in 2026

CHANNEL

IBM and HPE cut to two wholesalers each. Resellers lose the specialists they used to borrow.

TECHNOLOGY

Reading a manufacturer's full catalogue and rules went from years to weeks.

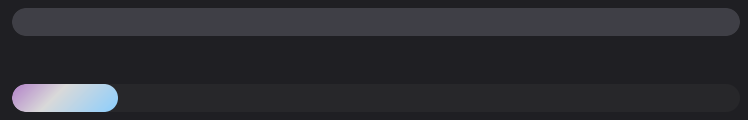

CATEGORY

US resellers already pay 49k USD a year for a bespoke version.

BUSINESS MODEL

Per build is the entry. Capture a vendor once, sell it to every reseller carrying that line.

THE SAME SERVER, TWO WAYS

50 SEK / build

Charged only when a valid order is delivered

10 SEK / rebuild

Design change on the same chassis, up to three times

~90 %

Gross margin on a build; 30% on the conversation tokens

25 %

To the wholesaler that co-sells

Two builds free at signup, then card top-ups from 100 SEK. Two builds a day is about **2,000 SEK a month**, a seat price a buyer recognises, with no procurement cycle. The deal layer on the next slide is where revenue per reseller grows.

WHERE THIS GOES

The deal in the channel has no system of record. We hold the hardest piece.

Now · The configuration

An order the manufacturer accepts

50 SEK an order, about 2,000 SEK a month per active specialist. 100,000 of them in Europe and the US.

LIVE

→

Next · The deal file

Re-price when a part is discontinued. Convert a rival's parts list to the brands you sell. Quote and order in one place.

Priced per reseller, not per order. The request, the configuration, the quote and the renewal in one record, three years long.

BUILT ON WHAT IS LIVE

→

Then · The channel

A share of the hardware that flows through, distributors first

Our pilot distributor moves 1.9 bn SEK a year. One percent of that is 19 MSEK, from one of several hundred distributors in Europe.

THE BUSINESS

Every step uses the same machinery: captured catalogues and verified rules. **The configuration is the wedge; the deal file is the product; the channel is the market.**

Engineer counts: Europe our estimate from headcount and channel benchmarks; US from BLS, 51,600 sales engineers in 2025.

DISTRIBUTION

A Nordic distributor runs the pilot. A three-year contract is in negotiation, to sign before year end.

IN NEGOTIATION · THREE YEARS · TARGET: SIGNED BY YEAR END

Adding a manufacturer	300,000 SEK
Monthly minimum, years 1 to 3	40k → 60k → 80k SEK
Unit	50 SEK per order
Co-selling	25% to the distributor
Proposed value	2.5 MSEK

The distributor

Nordic, 1.9 bn SEK, nine countries. Built the IBM side with us since June.

→

400 resellers

Already buy from the distributor. Pay per order, about 2,000 SEK a month per active specialist.

Non-exclusive.

COMPETITION

Nobody checks orders across manufacturers, and the catalogue alone does not get you there

WHO	WHAT THEY HAVE	WHAT THEY LACK
Manufacturers' own tools	Authoritative, one brand each	A specialist to drive them. Never check a rival's parts
Generic quoting software	Pricing and quoting for anything	Hardware rules. Will quote parts that do not fit together
Bespoke AI builds, US	One reseller, one catalogue, 49k USD a year	Multi-vendor. Every new customer is a rebuild
Wholesalers' specialist desks	People working in the manufacturers' tools by hand	Bandwidth. No tooling of their own, and being cut as vendors consolidate

Our rules come from working specialists, captured deal by deal. **The catalogue is the raw material; the expertise is the product.**

TEAM

Ten years selling this hardware, ten years shipping products, fifteen years building systems

FOUNDER · SALES, ARCHITECTURE

Axel Sundelöf

Runs Object First's Nordic organisation today: **zero to 1 MUSD a quarter with a five-person team**. Before that, data centre sales and solution architecture at HPE and NetApp. Sells Oyster.

FOUNDER · PRODUCT

Christoffer Jensen

Most recently CPO at a gaming company; before that eight years of product for **Scania, H&M, Försäkringskassan, MediCarrier and Carium**.

FOUNDER · ENGINEERING

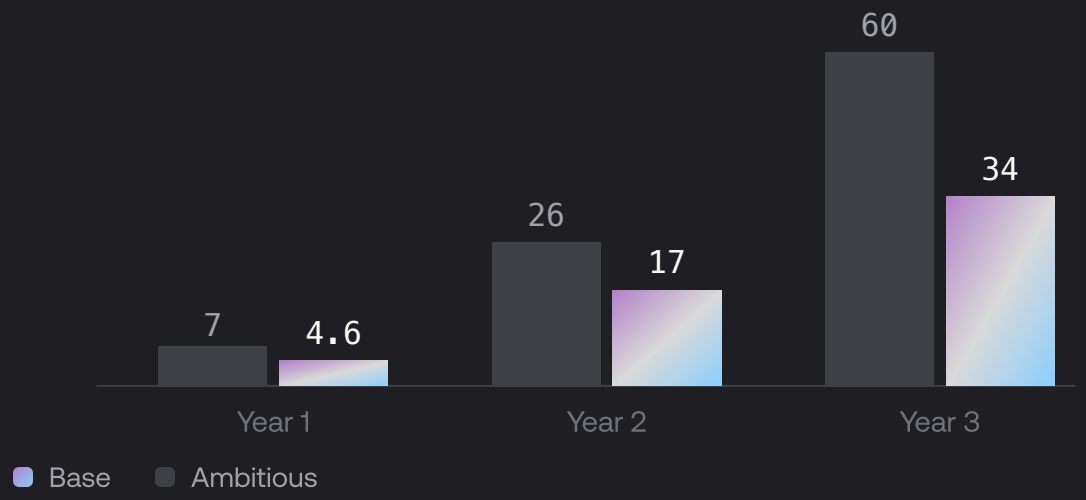

Isak Burström

Fifteen years full-stack, runs his own development agency, AI integration and system architecture. Owns the rules engine and the validation.

THE ASK

12 MSEK funds 24 months to break-even

EXIT ARR, MSEK

WHAT THE ROUND FUNDS

- **Three founders full time** from the first month of the round
- **Distributor contract signed** and selling, by year end
- **Two more manufacturers supported**, weeks each on the HPE machinery
- **1,000 active specialists**, 24 MSEK ARR: break-even Y3 Q2, no second round in the base case

USE OF FUNDS, 24 MONTHS

Hires 51% · Founders 31% · Overhead 13% · Inference 5%

Vertical SaaS sold at 7 to 8.5 times revenue in 2025. At 5 to 8 times: **170 to 270 MSEK** base, 300 to 480 ambitious.

Looking for a lead.
