

Oyster is software that configures and quotes enterprise hardware for IT resellers

It turns a customer requirement into a bill of materials that the vendor's own configurator accepts, plus the quote and the diagram. IBM and HPE are live. First customer: Pedab, a Nordic distributor with 400 reseller partners. Raising **12 MSEK** seed.

PROBLEM

Resellers lose deals because their engineers do not have the bandwidth

- The average solution architect covers **one to two vendors**
- The average reseller carries **five vendors**
- A request outside the architect's vendors, or while he is busy, is **turned away**
- A senior architect costs **90 to 130k SEK a month**. Nobody hires a second one for a few deals a year
- The lost deals are **never logged**

"AI assist means one engineer covers roughly five vendors."

Marius Midtskogen, solution specialist, Pedab Norway. Said before we had shown him the product

2 hours

per configuration today, by the one architect who can do it

5 minutes

with Oyster, by anyone on the sales team

1–2 of 5

vendor lines an architect can quote today

SOLUTION

You describe the deal. Oyster builds and validates the configuration.

1 · You describe

"180 TB replicated across two sites, plus an ERP server"

A sentence, or the customer's tender document

2 · Oyster builds

Asks the questions a specialist would, then drafts the full bill of materials

Every line checked against the vendor's own catalog and rules

3 · You send

Vendor-native order file, branded quote, architecture diagram

Uploads into the vendor's configurator and passes

minutes

Instead of hours of senior engineer time

5×

Vendors one engineer can quote

HOW FAR WE HAVE COME

We learned how to add a vendor on IBM. Now it is a process that takes weeks.

IBM Power and FlashSystem: rules engine, capture method and validation loop built from scratch

14 months

LIVE

HPE ProLiant, Alletra, MSA, SimpliVity: the same process, second time

2 weeks

LIVE

Huawei, xFusion, Dell, Lenovo: captured in priority order as customers ask

weeks each

NEXT

99 %

Of configurations pass the vendor's own configurator first time

110k

HPE option codes captured across 121 models in those two weeks

2

Vendor lines live. The seed round funds the next four

THE PARTNERSHIP

Pedab built the IBM line with us, then became our first customer and our channel to 400 resellers

June 2026

A Pedab solution specialist starts piloting on real IBM deals and reviews every output

August

The head of Pedab's IBM business unit becomes our internal sponsor

September

Pedab's CEO sees IBM's own configurator validate Oyster output

Agreed

First customer. 300,000 SEK for the full catalogue, a three-year seat contract with minimums stepping 8, 12, 16, and 25 percent revenue share on seats co-sold into its partner network

Oyster

Builds the product. Captures the vendor lines Pedab carries.

Pedab

1.9 bn SEK, nine countries. Uses Oyster itself, co-sells it to its partners and keeps 25 percent on those seats. Its specialists stamp configurations.

400 reseller partners

Already buy their hardware from Pedab. Each engineer seat 6,500 SEK a month.

WHAT 400 PARTNERS ARE WORTH

One distributor's partner base is 78 MSEK of seats. The plan needs 18 percent of it.

PARTNER TIER	PROFILE	PARTNERS	SEATS EACH	SEATS	
A	8+ engineers, own configuration desk	32	8	256	10% 100 seats 7.8 MSEK ARR
B	2 to 7 engineers, 2 to 4 vendor lines. The wedge	128	3	384	18% 180 seats Plan, end of year 2
C	0 to 1 engineer, leans on Pedab presales	240	1.5	360	36% 360 seats Plan, end of year 3
Total	at 6,500 SEK a seat, list	400		1,000	50% 500 seats 39 MSEK ARR

WHY NOW

Three things changed in 2026

CHANNEL

IBM and HPE cut to two distributors each

Resellers lose the distributor presales desk they leaned on. Pedab needs a second act, and this is it.

TECHNOLOGY

Capturing a vendor catalog went from years to weeks

Frontier models read the configurator; deterministic rules do the checking.

CATEGORY

US resellers already pay for a bespoke version

Quote cycle from 1 to 2 days to 15 minutes at one reseller, 49k USD in year one.

BUSINESS MODEL

Capture a vendor once, sell it to every reseller carrying that line

6,500 SEK / seat / mo

5 to 7 percent of the engineer it multiplies

86 %

Gross margin with inference as cost of goods

300k SEK

Catalogue fee. Pedab pays it first; new vendor lines are captured at customers' request

CHANNEL

Distributors co-sell into their partner networks and keep 25 percent. A second distributor in another geography from year two. Quoting software overall is a 7 billion USD category by 2030, and none of it validates hardware physics.

MARGINAL COST

The sixth reseller on a captured line costs us about 48,000 SEK a year in inference. The bespoke alternative costs the reseller 49,000 USD.

TEAM

Ten years selling this hardware, ten years shipping products, fifteen years building systems

FOUNDER · BUSINESS, ARCHITECTURE

Axel Sundelöf

Ten years in data centre sales and solution architecture at **HPE, NetApp and Object First**. Watched resellers lose deals they should have won. Runs customers and distribution.

FOUNDER · PRODUCT

Christoffer Jensen

Most recently CPO at a gaming company; before that eight years of product for **Scania, H&M, Försäkringskassan, MediCarrier and Carium**.

FOUNDER · ENGINEERING

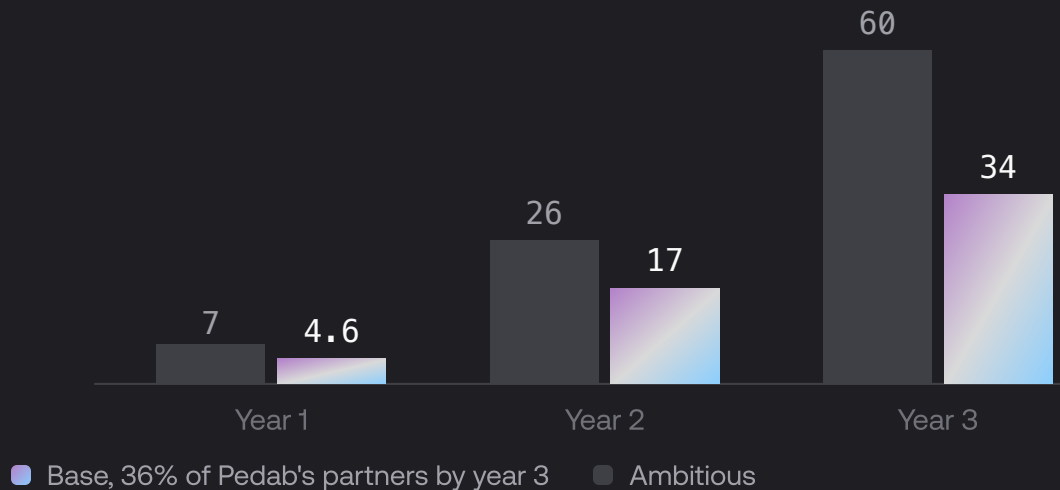

Isak Burström

Fifteen years full-stack, runs his own development agency, AI integration and system architecture. Owns the rules engine and the validation.

THE ASK

12 MSEK takes Oyster to break-even. The base case is worth 170 to 270 MSEK at exit.

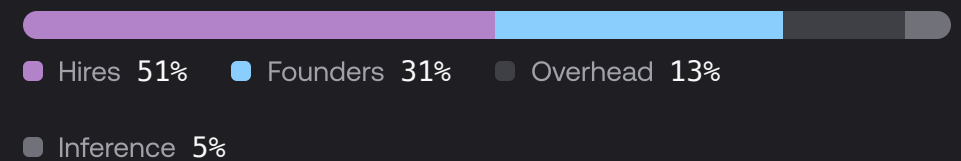

EXIT ARR, MSEK

Y3 Q2

Cash-flow break-even at about 310 seats. No second round needed in the base case

USE OF FUNDS, 24 MONTHS

Vertical SaaS changed hands at 7 to 8.5 times revenue in 2025. At 5 to 8 times, year-three base ARR is **170 to 270 MSEK**; the ambitious case is 300 to 480.
